

Aegivex AI - Product Requirements Document (PRD)

Version: 1.0

Document Type: Product Requirements Document (PRD)

Project: OKX.AI Genesis Hackathon

Prepared By: Aegivex AI Team

1. Product Overview

Aegivex AI is an AI-powered Web3 Security Copilot designed to help users identify potential security risks before interacting with blockchain wallets, smart contracts, tokens, websites, or blockchain transactions. The platform combines artificial intelligence with blockchain security analysis to simplify complex technical information into clear, actionable recommendations. The goal is to make blockchain security understandable and accessible for both beginners and experienced users.

2. Product Vision

To become the most trusted AI-powered security assistant for the Web3 ecosystem.

3. Product Mission

Help users make safer blockchain decisions by providing instant AI-powered security analysis and easy-to-understand explanations.

4. Business Goals

- Reduce Web3 scam exposure.
- Improve blockchain security awareness.
- Increase user confidence.
- Build an intelligent AI Security Copilot.
- Deliver a production-ready ASP for OKX.AI.

5. Target Users

User Category	Target Segments
Primary Users	Crypto Beginners, Traders, Investors, NFT Collectors, DeFi Users
Secondary Users	Blockchain Developers, Security Researchers, Community Managers
Enterprise Users	Wallet Providers, Exchanges, Blockchain Companies

6. Problem Statement

Many Web3 users struggle to determine whether a wallet, smart contract, token, website, or transaction is safe. Current security tools are often difficult to understand and require users to visit multiple websites. Aegivex AI solves this problem by providing one intelligent AI assistant that explains risks in simple language.

7. Product Objectives

- Analyze wallet addresses
- Analyze smart contracts
- Analyze token contracts
- Scan websites
- Explain blockchain transactions
- Chat naturally with AI
- Receive actionable recommendations
- Save scan history

8. Core Features

1. AI Security Chat
2. Wallet Risk Scanner
3. Token Risk Analyzer
4. Smart Contract Analyzer
5. Website Safety Scanner
6. Transaction Explainer
7. Security Dashboard

- 8. Scan History
- 9. User Authentication

9. Functional Requirements

The system shall:

- Authenticate users.
- Accept wallet addresses.
- Accept token contract addresses.
- Accept smart contract addresses.
- Accept website URLs.
- Accept blockchain transactions.
- Generate AI explanations.
- Calculate risk scores.
- Store previous scans.
- Display user dashboard.

10. Non-Functional Requirements

Attribute	Requirement Detail
Performance	Response time below 5 seconds.
Availability	99.9% uptime.
Security	Encrypted communication.
Scalability	Support thousands of users.
Reliability	Accurate AI responses.
Usability	Beginner-friendly interface.

11. User Flow

User Login → Dashboard → Choose Scanner → Submit Input → Backend Analysis → AI Risk Evaluation → Generate Recommendation → Display Results → Save Scan History

12. MVP Scope

In Scope	Not Included
• AI Chat • Wallet Scanner • Token Scanner • Contract Scanner • Website Scanner • Transaction Explainer • Dashboard • Authentication	• Mobile App • Browser Extension • Team Workspace • Enterprise Dashboard

13. Future Scope

- Browser Extension
- Mobile Applications
- Wallet Monitoring
- AI Threat Prediction
- Team Collaboration
- Enterprise APIs
- Multi-chain Expansion

14. Success Metrics

- Fast response time
- Accurate AI recommendations
- High scan accuracy
- Positive user experience
- Stable platform performance

15. Acceptance Criteria

The product is considered complete when:

- All MVP features function correctly.
- AI generates understandable responses.
- Users can successfully complete security scans.
- Scan history is stored.
- Dashboard loads successfully.

- Authentication works correctly.
- Application is deployed successfully.

16. Deliverables

- Web Application
- Backend API
- AI Integration
- Database
- Dashboard
- Documentation
- GitHub Repository
- Live Demo

17. Project Outcome

Aegivex AI will provide users with an intelligent security assistant capable of analyzing blockchain risks in real time while making Web3 security easier to understand. The MVP should demonstrate the complete AI-powered security workflow required for the OKX.AI Genesis Hackathon while providing a solid foundation for future product development.
