

Aegivex AI – Project Overview (MVP)

Project Name

Aegivex AI

Tagline

Your AI Security Copilot for Web3

Project Idea

Aegivex AI is an AI-powered Web3 Security Copilot built for the OKX.AI Genesis Hackathon. The goal is to help users identify potential security risks before interacting with wallets, tokens, smart contracts, websites, or blockchain transactions. The platform explains risks in simple language and provides clear recommendations.

MVP Features

- AI Security Chat
- Wallet Risk Scanner
- Token Risk Analyzer
- Smart Contract Analyzer
- Website Safety Scanner
- Transaction Explainer
- Dashboard

User Flow

1. User signs in.
2. Opens dashboard.
3. Selects scanner.
4. Submits input.
5. Backend analyzes data.
6. AI generates risk score, summary, explanation and recommendation.
7. Results are saved.

Tech Stack

Frontend: Next.js, React, Tailwind CSS, TypeScript

Backend: FastAPI (Python)

Database: PostgreSQL

AI: OpenAI API

Deployment: Vercel + Railway/Render

Main Pages

Landing Page, Login, Dashboard, AI Chat, Wallet Scanner, Token Scanner, Smart Contract Scanner, Website Scanner, Transaction Explainer, Scan History, User Settings.

Goal

Build a polished MVP demonstrating an AI-powered Web3 Security Copilot for the OKX.AI Genesis Hackathon.
